

# HaloCare is here for you

Assistive Technology for community care

**HaloCare Assistive Technology has been designed to empower clients and increase their sense of independence in the home. The HaloCare service is personalised to each client's needs across three distinct areas; Safety, Social & Wellness and Vital Signs.**

### **Safety**

Keeping clients safe at home is paramount. HaloCare technology is best-in-class and developed to promote independence while ensuring clients living at home, can do so safely.

### **Social & Wellness**

HaloCare offer a bespoke service where trained care specialists will call clients, at their request. This service helps to keep clients connected and works in conjunction with family visits and homecare support.

### **Vital Signs**

HaloCare have adopted Remote Patient Monitoring to provide health professionals and clinicians with timely access to client's vitals for better health outcomes and wellbeing.

HaloCare's combination of Smart devices, HaloPad technology and a 24/7 Care Hub support team, offer a solution that relieves pressure on frontline staff, improves hospital discharge times and provides a holistic approach to care in the community, in tangent with home help visits.

# Key advantages of the HaloCare Service

**HaloCare offers a long-term solution that supports the client's sense of independence, providing safe & effective care in the community that's benchmarked to international standards and practices, while reducing costs for the healthcare industry.**

## **Keeps clients safe at home**

Our independent living solutions allow for clients to live at home and feel empowered while receiving the best quality of care possible. HaloCare Assistive Technology uses AI and motion detection to learn the client's environment to help manage potential risks to personal or environmental safety in and around the home. HaloCare also provides medication prompts to support individuals with medicine adherence, hydration and nutrition.

## **Tackles social isolation**

Social isolation can become a real problem for many people, in particular, older people, those living with disabilities, or those with additional needs.

HaloCare keeps clients socially connected in between home help visits and Circle of Care visits through 'Comfort Calls' from the HaloCare Care Hub team.

## **Best-in-class Smart Devices**

HaloCare Smart Devices incorporate artificial intelligence and use motion detection to learn the client's home environment. After an initial learning period, HaloCare Smart Devices will then be able to detect changes in the clients' home environment that are out of the ordinary including doors left open, an increase in room temperature and if the client has not moved in a prolonged period of time. Having the HaloCare solution in place ensures that clients are safe in between home help visits.

HaloCare adopts a 'camera-free' approach which makes incorporating Assistive Technology into the client's home as unintrusive as possible, allowing the client to live at home with privacy and dignity.

## Happier Clients

Health professionals will be familiar with the scenario of clients wanting to remain at home for as long as possible, and the avoidance of wanting to be moved into a care facility.

HaloCare promotes independence, and with our discreet technology and 24/7 Care Hub solution, we can make living at home a safe, dignified and empowering experience for the client.

Ultimately, with a bespoke HaloCare solution in place, clients, their Circle of Care and home help are all happier knowing that the client is receiving the highest quality of care at all times in addition to support from home help.

# How HaloCare works

## Smart Devices

Core to the HaloCare solution, is a range of unintrusive, contactless smart devices installed in the home. These smart devices range from fall detectors to voice activated panic alarms, and fit seamlessly into the decor of a home as a wireless and discreet solution. The combination of best-in-class hardware installed in the home, and our proprietary software; Aura, allows the Care Hub specialists to respond immediately should something out of the ordinary happen.

## HaloPad

Developed with a user-friendly interface, The HaloPad can provide clients with access to video calls with the Care Hub and their loved ones, alongside personalised location, medical condition and interest specific information. HaloPad not only helps tackle social isolation, but also provides the client with access to additional virtual well-being services such as physio, for a holistic approach to healthcare. The HaloCare social platform allows clients to both receive daily 'check-in calls' from the experienced and empathetic Care Hub Specialists and to stay in easy contact with their loved ones without the need to be tech-savvy.

## Care Hub

The Care Hub is run by experienced and highly trained care specialists who are dedicated to improving the lives of our clients. The Care Hub itself is equipped with the latest state-of-the-art technology and is available around-the-clock to support clients and their loved ones. HaloCare is a cost-effective complimentary service to care in the home and can provide much needed peace-of-mind and respite in between home help visits.

## The Circle of Care Companion App

The Circle of Care Companion App provides a secure link to the HaloPad, to allow video calls, photo sharing, carer schedules and activity dashboards, to the primary caregivers as required.

# FAQ's

## **How will HaloCare work alongside a current care package?**

HaloCare has been developed to assist with independent living and ensure that clients can safely live independently at home and has a support system in place 24/7.

The power of HaloCare is its sleek, unintrusive design and ability to work quietly in the background to allow the client to live at home with privacy and dignity. The HaloCare solution is installed by a trained technician for a smooth transition into adopting HaloCare in the home.

HaloCare offers around the clock support in the form of digitally inclusive technology and an expertly trained team that the client can contact, in between home help visits and visits from the circle of care. The client's Circle of Care has peace of mind that their loved one is safe at home even when they can't be there.

## About HaloCare

**HaloCare is a 24/7, 365-day technology enabled care solution for people who wish to remain independent in their own homes but need a little extra support day-to-day.**

HaloCare adopts a holistic approach to client-centred care and uses Assistive Living Technology to support individuals to live healthier, safer lives at home.

At HaloCare, we believe in providing exceptional client experience from the first interaction with us, right through our client's journey of care. Our technology is world class and we are passionate about the care we provide. By using technology that works seamlessly in the background, our clients can continue living their everyday lives with the knowledge that HaloCare is always there to support them.
